

**In the Claims:**

Claim 1-3 (canceled):

Claim 4 (new) A filler material of discrete randomly placed open celled reticulated polyurethane foam pieces for use in a cushion for furniture, pillows, garments, and the like, said cushion comprising a forward edge and a rearward edge, a top and a bottom layer which are substantially co-extensive flexible materials superimposed and secured together about the entire perimeter thereof, said cushion being further comprised of a multitude of individually fabricated foam pieces, said individually fabricated foam pieces comprising:

- (i) a substantially 100% open cell structure,
- (ii) a cross sectional area having a moment of inertia sufficient enough to allow the foam piece to flexibly bend under pressure applied by a portion of a human body,
- (iii) a strength of material having a level of yield enough to enable the foam piece to repeatedly bounce back to their original shape after removal of pressure applied by a portion of a human body.

Claim 5 (new) The claim as recited in claim 4 wherein the foam pieces have a cylindrical size from approximately 1/4 inches to 1/2 inches in diameter by up to 2 inches long.

Claim 6 (new) The claim as recited in claim 4 wherein the foam pieces have a rectilinear size from approximately 1/4 inches thick by 1/2 inches wide by up to 2 inches long.

Claim 7 (new) The claim as recited in claim 4 wherein the foam pieces have a void space of 97% and where the 97% void space is characterized as 100% open.

Claim 8 (new) The claim as recited in claim 4 wherein the density of the multiple foam pieces within the cushion is between 0.8 pcf and 2.0 pcf.

Claim 9 (new) The claim as recited in claim 4 wherein the individual foam pieces have the ability to last longer without matting than regular open celled polyurethane foam of similar sizes,

Claim 10 (new) The claim as recited in claim 7, wherein air can readily pass though the void space of 97% and remove unwanted heat and moisture from within the cushion.

Claim 11 (new) The claim as recited in claim 4 where said multitude of foam pieces having a density adequate enough to provide filtering out of warm and damp air within the pillow, while providing adequate support for the portion of the human body.

**Certificate of Mailing (37 CFR 1.8a)**

I hereby certify that this document (along with any document referred to as being attached or enclosed) is being deposited with the United States Postal Service as First Class Mail in an envelope addressed to: Commissioner of Patents and Trademarks, Washington, D.C. 20231, on date shown below.
